AI Business Case Study

Automating Manual Processes for Greater Impact.

Executive Summary

Problem: The charity lacks resource, time, and visibility to grow. They are currently looking for the fastest ways to become sustainable.

Solution: Developed AI solutions to increase productivity.

Benefits/ROI: We compressed 175 hours of work creating tender and award applications into a single click, $8750 in savings across 7 different applications.

Risk/Mitigations: Held on cloud and local server to ensure security measures. Already used apps in our ecosystem.

Problem and Opportunity

Resource:

- No dedicated marketing team
- Marketing is inconsistent and not owned
- No clear strategy or accountability

Time:

- Team operating at full capacity
- Marketing is the first to drop
- No consistency > No growth

Visibility:

- Inconsistent content across platforms
- Low visibility to funders and partners
- Impact is not clearly seen

Lack of Budget:

- No budget for marketing or tools
- Tenders rewritten from scratch
- Effort spent does not scale

Solution

All in one. Couple click workflow. Easy to use.

Tenders & Awards Applications

The Engine:
Integrated n8n platform,
AI studio,
workflow running silently in the background.

The Interface:

A single customized phone application.

Staff do not see the code; they only see the results.

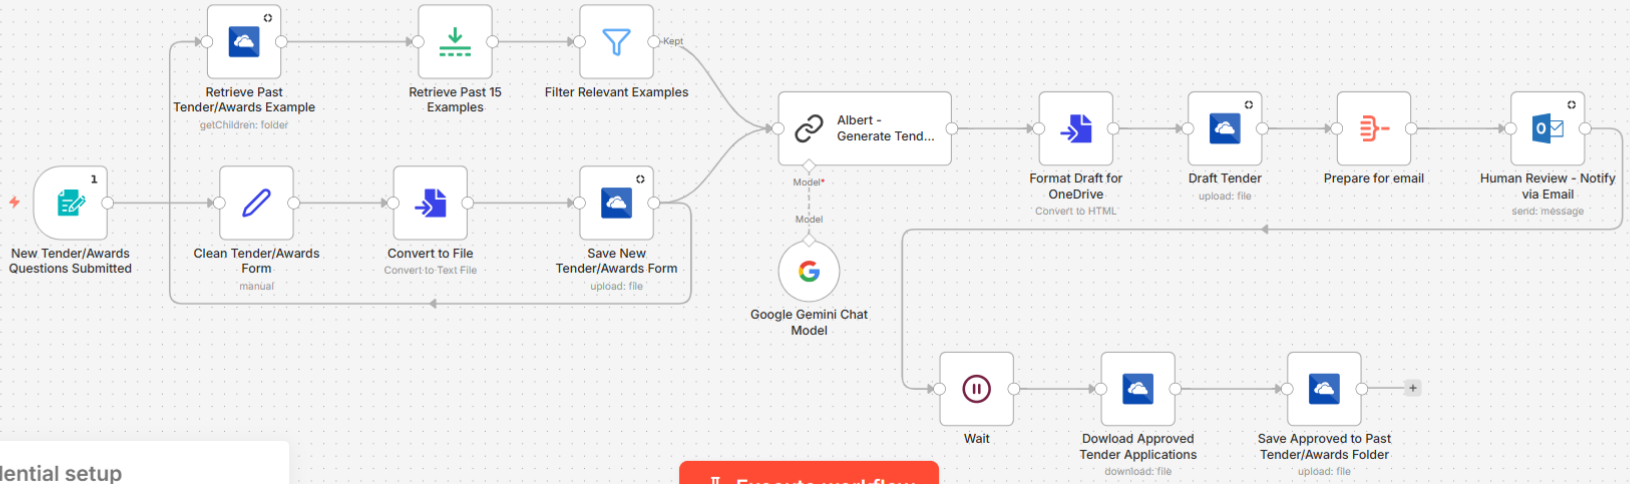
Editor Executions Evaluations



Execute workflow

One click credential setup
Setting up credentials on n8n Cloud is easier for supported services.

Benefits & ROI

Time Saved
175 hours back. No manual reporting.

Funding Unlocked
Applications sent out **extremely faster**, strengthens funding flow.

Visibility
Increased visibility. Actual Public Exposure.

Cost Avoided
No hiring needed - AI fills the gap, you keep the budget.

The Result: What took days? Now takes minutes. Tenders and applications, handled.

Risk and Mitigation

System Reliability
App goes down - workflow can be executed by n8n.

Cybersecurity
Filter out what goes into the LLM, Microsoft database already signed off as secure.

People
Sensitive data is protected via SharePoint or one drive with access controls in place.

Cost
Hosting on local server to avoid token-based pricing ($80).

Maintenance
APIs update silently and break workflows. Regular scheduled checks with an assigned maintainer.

Implementation Plan

Current:

- Application
- Tender & Awards Automation

In Development Automations:

- Content Creation
- Performance tracking
- External Data Analytics
